

PRoVisG: Planetary Robotics Vision Ground Processing

- What do we do
 - Combine expertise in Computer Vision for Planetary surfaces
 - Enhance scientific exploitation
 - Generate high – level tools
 - Test & demonstrate & teach

How to propose....

- Initial Network: ExoMars PanCam 3D Vision
- Enough TIME for Proposal (8 Months for PProVisG)
 - Top-Down: Final Version 2 Weeks Prior to Closing Date
- See ALL Participants at least ONCE
- Start: Have a hypercritical internal Reviewer
 - Present your key ideas on ONE viewgraph, must be understood
- Trust in your message & targets
 - Go for unorthodox solutions that make good sense
- Match the Call (and let the Reviewers know)
- Have the Officer on the phone EARLY enough
- Ask for budget figures but don't give early promises
- You're Boss
 - Ask Everybody but keep with decisions
